

James Carlson, DDS presents MyFit™ dentures, a personalized solution for the millions who suffer from ill-fitting dentures and those people who are facing the decision to have their teeth removed. Dentistry's unpredictable & unprofitable business of "doing dentures" has left the vast majority of these people with little or no hope. This huge demand for full mouth dentistry is an incredible opportunity for dentists who are willing and prepared to respond.

**Within ten years an estimated 50 million people in North America will be edentulous.
What a great time to be the best!**

MyFit dentures is a real-time, live-patient program that will teach you how to successfully care for an edentulous patient. This is *not* another technique for making a set of false teeth. You will take part in every process involved in the complete restoration, from the initial screening appointment to the delivery of the final denture.

The MyFit method is a significant departure from the perceptions that most dentists and patients have about dentures. Diagnosing, rehabilitating and predictably reconstructing a stable dentition is not easy, quick or cheap. It takes a lot more than a fancy impression and a pretty set-up.

Goals of the Program

- Show the difference between "doing dentures" and providing comprehensive patient care.
- Teach how the muscles, bones and TM Joints affect the stability of removable prosthetics.
- Demonstrate the elements and techniques of a complete examination and testing protocol.
- Demonstrate the efficacy of rehabilitation prior to design and fabrication of the final denture.
- Demonstrate how to design an ideal dentition for each individual patient.
- Provide the dentist and staff with the tools and systems for implementing new, lucrative and gratifying services into the practice.
- Provide solutions to the financial pitfalls of trying to compete in the "denture business".

Session 1

- MyFit - A Patient Focused Method
- The 4 Pillars of Stable Occlusion
- **Discovery** – Examination & Testing
- Accurate Diagnosis & Case Planning
- Fearless Case Presentation
- **Rehabilitation** – Heal & Stabilize

Session 2

- Confirm Occlusal Stability
- **Creation** – Custom Dentition Design
- Hassle Free Bite Rims
- Get the Right "Bite"
- Predictable & Profitable Delivery
- Implementation Strategies for the Practice

Stop just "doing dentures" and learn to predictably care for edentulous patients!

Seattle, Washington

Session I – September 19-20, 2008
Session II – December 12-13, 2008

Course Investment

Doctor & 1 Staff	\$3,795
Additional Staff	\$500
Doctor	\$3,250
