

Finally, An Articulator With Its Head Screwed On Straight.

The Accu-Liner Is The First Instrument Designed Specifically To Diagnose And Treat The Same Conditions You Do.

A paradigm shift is taking place in the perception and treatment of occlusion. And the Accu-Liner has been part of it from the beginning.

Occlusion is not just about teeth anymore; the definition has changed to a much broader one. The Accu-Liner is truly revolutionary because it was designed to work in conjunction with this new way of thinking. With this system, you actually treat patients according to principles of harmony and homeostasis in the neuromuscular and structural systems.

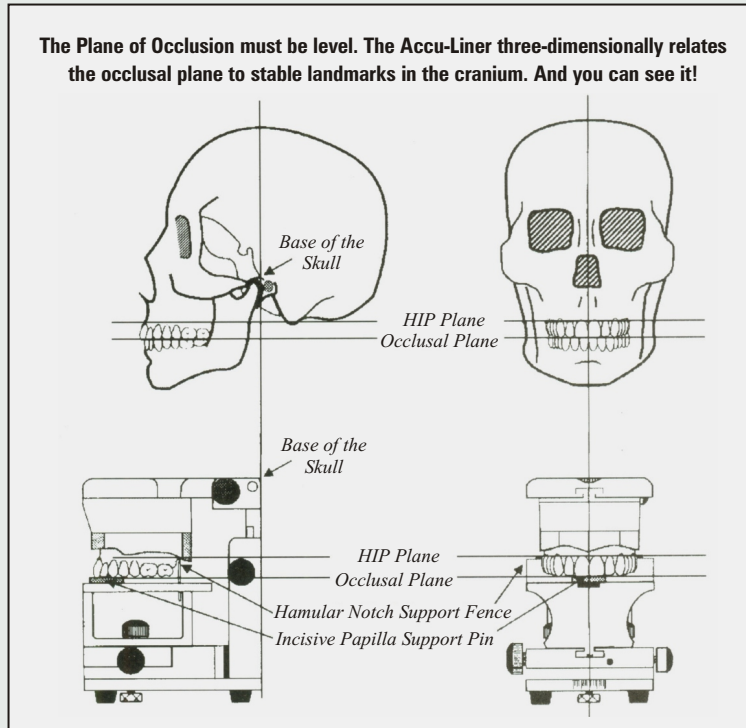

One reason is that the Accu-Liner is a quantum leap ahead of the measuring capabilities you've had in the past; it lets you measure – in millimeters – all movements of the mandible as well as distortions in the maxillary arch. You don't have to guess any longer.

But even more important, the Accu-Liner relates the plane of occlusion to stable landmarks in the cranium – and lets you see it! It uses the base of the skull, not the hinge axis of the condyle, as its anatomical benchmark.

Think about an airplane's cockpit instruments for a moment. The Accu-Liner is a lot like the compass, altimeter and attitude indicator: it shows you

Accu-Liner™ Orthopedic Analyzer/Articulator

what spatial relationship the teeth and jaws have to the rest to the skull and to each other. And, like an airplane reaching the ground, the maxilla and the occlusion must be level at contact.

Accu-Liner Pays For Itself – Quickly.

The Accu-Liner is one of the most cost-effective pieces of dental equipment on the market today. It can pay for itself surprisingly fast.

First, the Accu-Liner helps you confidently sell more dentistry, because it's such a great educational and diagnostic tool. It allows you to evaluate occlusal problems more effectively, and then show your patients exactly what's happening. When they actually see what's causing their problems and affecting their health, they're much more likely to accept the treatment plan. It's also important to remember that the Accu-Liner adds a new dimension to your existing diagnostic work-ups, with chargeable new services.

Then, you can fabricate any dental appliance or prosthesis very precisely, level and at right angles to the forces of occlusion. You'll be able to deliver dentures, seat crowns & bridges and provide orthopedic/orthodontic services predictably with dramatically less time wasted adjusting the occlusion.

All of this means your patients feel better quickly. And when patients experience excellence in your care, they become your best advertising. That means you'll have plenty of new patients waiting to fill the slots left open by your efficiency.

Call now to learn more about how the Accu-Liner can make your patients healthier and more satisfied, and your practice more prosperous than ever.
